Quick Polls via Forum Discussions

Graham Smith - 2019-05-30 - [Functions of Kahootz](#)

Adding a Quick poll to a discussion message can quickly gather a consensus of opinion by providing an easy way for users to respond to questions; they can be on any topic and can be setup to run for a certain period of time. You can choose a select-one or select-many type question for your quick poll.

To create a quick poll:

1. When creating a discussion in a forum, tick the **Quick poll** box.
2. You can then enter your question, the possible answers and select the close date.
3. Click **Save**.

The screenshot shows a 'Quick Poll' form with the following elements:

- A header 'Quick Poll' with a checked checkbox and the text 'Add a quick poll'.
- A section titled 'Question *' with a text input field containing the placeholder 'Enter the question you would like to ask'.
- A section titled 'Options *' with a text area containing the placeholder 'Enter the options people can select, one per line'.
- A section titled 'People can select *' with two radio buttons: 'one option' (selected) and 'many options'.
- A section titled 'Close date *' with a date input field showing '31/12/2020'.

The quick poll is included in the email notification, along with a link to answer it.

The quick poll results are available when viewing the message in the workspace.
