Select "one" and Select "many" Columns within a Database

Chris Holt - 2019-04-11 - Databases

These "2" types of columns within Kahootz databases now allows for colour coding as detailed below.

Select "one" Option

When creating the database, chose the "select one from list" option from the drop-down menu.

Add all the required values to the list as shown below.

Pick the colour for each entry by clicking the pallet block at the end.

Complete the rest of the database setup as required and then click save.

Now you're all set to add entries to the database as shown below.

Select "many" Option

When creating the database, chose the "select many from list" option from the drop-down menu.

Add all the required values to the list as shown below.

Name *

Select (many) Option

Guidance

Optional guidance text to be shown when a user enters data.

List Values

Chris ☐ ✕

Peter ☐ ✕

Gary ☐ ✕

Niall ☐ ✕

John ☐ ✕

⊕ Add a new value

Pick the colour for each entry by clicking the pallet block at the end.

Chris ■ ✕

Peter ■ ✕

Gary ■ ✕

Niall ■ ✕

John ■ ✕

⊕ Add a new value

Complete the rest of the database setup as required and then click save.

Now you're all set to add entries to the database as shown below.

Search Functionality

The search feature for these types of columns is simple and effective, simply click on the name or colour required.

*** Example - I want to show only the dates that "Chris" is assigned too ***

Open the database and click on the required "select" value that you wish to report on.

This will now only show all the entries for that value/colour as shown below.

There are 3 matches for your search (**Select (one) Option** is `Chris`). Change Search. Remove Search.

🔍 Filter   Order by▾   ▤ ▦ ▥

Date	↑	Select (one) Option		☐
09 May 2018		`Chris`	🔍 ✏	☐
10 May 2018		`Chris`	🔍 ✏	☐
14 May 2018		`Chris`	🔍 ✏	☐
			Modify Delete	
			Quick search 🔍	

You can then chose to "change the search" or "remove the search" if required.
