# Workspace Templates

Chris Holt - 2025-10-31 - [Workspaces](#)

## What are Workspace Templates

Workspace templates help you save time by reusing structure, content, and permissions across multiple workspaces. Instead of setting up each workspace from scratch, you can start with a template that includes everything you need.

This is especially useful if you manage several workspaces that follow the same format—like regional teams or recurring projects.

Tip: If you can't see the New Workspace option, you may not have permission. Contact your Site Owners to request access or ask them to create the workspace for you.

Accordion body...

If you have a particular use case for Kahootz, instead of creating multiple workspaces with the same folder content.

You may want to create a workspace template to have some related content, structure, and permissions already set up.

**Tip:** If you cannot select "**New Workspace**" then you do not have the relevant [permissions](#). You must [Contact the Site Owners](#) who can give you permission or create the workspace.

This is extremely useful if you require several workspaces that work similarly. For example, regional areas that all need the same workspace structure. This will save you time setting up the new individual workspaces.

As shown below, the standard Kahootz templates are available when creating a new workspace.

### Workspace Templates

If you use a template, your workspace will be created with suitable content and configuration for a particular task.

#### Choose a Template

- ☒ **None** - Create an empty workspace
- ☐ **Online Boardroom**  
An example workspace that you might provide to work with your board members
- ☐ **Client Portal**  
An example workspace that you might provide for each of your clients
- ☐ **Event Management**  
An example workspace that your team might use to plan events and company meetings
- ☐ **Project Management**  
An example workspace that you might provide to collaborate with your project team

## Why Create Workspace Templates

If you have a workspace, you'd like to copy - for example, a good layout you'd like to use to start all your projects.

Kahootz can add that to the list of Workspace Templates (see image above) offered when creating new workspaces.

## Who can Create Workspace Templates?

Only the Site Owners can approve the request to add a Workspace Template to your site.

If you're a Site Owner and want to add one, raise a ticket to the [Kahootz Support Team](#).

If you're a standard user, you must contact your [Site Owners](#) and ask them to add it.

## How do I Add Workspace Templates

The best way is to create a new workspace and dedicate it solely as the template for that workspace.

We'll then use that workspace to create the template from, so if you later down the line require some changes.

You make the changes inside that "workspace template" you've created, and we'll simply update your template.

Therefore, once you've got a workspace you would like to template, contact the [Kahootz Support Team](#).

When contacting support, please provide the name of the workspace you wish to use for the template.

Along with the name of what to label the workspace template, which we'll then export for you.

Once it's been added to your site, you can create a workspace from the template to test.

## Custom Workspace Templates

**Tip:** Templates don't need to be permanent. You can customise your workspace after it's been created from a template.

Here are some examples of custom Workspace Templates we've created internally to show you how they'll appear on your site:

### Workspace Templates

If you use a template, your workspace will be created with suitable content and configuration for a particular task.

**Choose a Template**

☒ **None** - Create an empty workspace

☐ **Client Portal Template**

☐ **Whole Organisation**

☐ **Internal Shares**

## License Type

**Tip:** In order to create custom workspace templates, an Enterprise license is required.

If you DO NOT have an Enterprise license, your [Site Owners](#) must contact their Account Manager.
