

Being a manager

Software Support - 2017-06-21 - Workspace Managers

Being a manager means that you have full control of a workspace.

Managers can:

- View, modify and delete any item in the workspace.
- Change the settings of the workspace.
- Create teams and assign people to them to control permissions.
- Control the membership by inviting and removing people.
- See the recycle bin and restore deleted items.

A workspace can have as many managers as you like; all of them will have equal powers.

Manager rights are specific to a workspace - you can be a manager of one workspace but a normal member of another.

Not sure if you're a workspace manager? If you are, you will see the **Manage Workspace** cogwheel icon at the top of the page.
