## How-To Bulk Update/Modify Multiple Database Rows

Software Support - 2022-03-31 - How-To

This KB article will provide step-by-step guidance regarding updating/modifying multiple Database entries at the same time within your own Kahootz site.

In order to modify rows within a Database, you require "modify" permissions, therefore, if you cannot follow these steps - <u>contact your Workspace Manager</u>.

Open the Database and select all the rows you wish to modify by ticking/selecting each row's checkbox down the right-hand side as shown below.

5 entries				
Entry ID	Name	#		
PBS1	Entry 1	101	• / h	
PBS2	Entry 2	2	0/1	$\checkmark$
PBS3	Entry 3	303	⊙ / ₽	
PBS4	Entry 4	4	• / 4	$\checkmark$
PBS5	Entry 5	5	• / 4	$\checkmark$
		Modify	Del	ete

As shown above, I've selected 3 rows to edit - for this example, I wish to change the single numbers in the (#) column to 3 digits to match the other values.

Click on the "modify" button at the bottom, next to the delete (be careful not to press the delete) button.

## **Modify Database Entries**

					Wide layout	Long layout
Entry 2		Name Entry 2	# 2	E.		
Entry 4		Name Entry 4	#			
Entry 5		Name Entry 5	5			
Save	Cancel					

Now change the individual values of the selected rows by entering the correct number into each field.

Entry 2	Name Entry 2	#
Entry 4	Name Entry 4	# 404
Entry 5	Name Entry 5	# 505

However, you may need to make a bulk change to a single value ie: change all entries from Company A to Company B instead.

Therefore, change the first value as shown in the screenshot below to Company B...

Entry 2	Name Entry 2	# Company B
Entry 4	Name Entry 4	# 404
Entry 5	Name Entry 5	# 505
Save Cancel		

Now press the "copy this value to the entries below" button/icon as shown below...

Copy this value to the	e entries below	The value has been copied to the entries below
Entry	Name	#
2	Entry 2	Company B
Entry	Name	#
4	Entry 4	Company B
Entry	Name	#
5	Entry 5	Company B

As shown above, all the select entries now show the same bulk value across all the fields.

Press the "save" button.

All the selected rows will now be updated with your changes.
